

Quality construction

All Finnforest Finnlife® log cabins are produced from the highest quality Nordic softwood, sourced from well managed and sustainable forestry. Log thicknesses vary from 19mm to 68mm depending on the model, and all provide a solid and durable structure to enjoy.

All come with a range of quality fittings and most are finished with green shingle tile roof coverings. Selected models have double glazing and tongue and groove fitted roof and floor boards as standard. The log cabins are adaptable and some can be enhanced by adding a sauna, underfloor heating, insulation kit, flooring pack, guttering kit and security alarm. (See page 43 for details.)

Quality shingled tile roof.

Sturdy roof beams, gables and fascias (model specific).
